GENERATOR CONTROL PANEL

## Configurable to suit any make of engine.

The control philosophy of the P&S Automation Generator Control Panel is based around the well-proven, class-approved Auto Maskin DCU 305 generator control unit, compiled with an operator HMI interface unit fitted to the front panel.

Included with the inbuilt functions is an alarm list on the HMI which gives a list of all connected sensors and whether or not they are in alarm, and an event log that lists the last 500 events.
